(project_structure) عشقم با دقت ببین این لاگ تمام دایرکتور ها و فایل های پروژ من است

اظهارنامه گمرکی ایران PDF برای پردازش دسته‌ای فایل‌های (process_pdf_to_excel.py) توسعه یک اسکریپت پایتون Regex (وارداتی و صادراتی)، استخراج داده‌های کلیدی با استفاده از، و ذخیره نتایج در یک فایل اکسل با فرمت مشخص.

جزئیات پروژه:

ورودی:

در یک بچ پردازشی باید همنوع باشند (یا همه PDF اظهارنامه گمرکی. محدودیت: تمام فایل‌های PDF یک پوشه حاوی فایل‌های کلاس) وارداتی یا همه صادراتی). اسکریپت باید نوع فایل‌ها را بررسی کرده و در صورت مخلوط بودن، خطا دهد. پردازش اصلی CustomsDocumentLoader):

نتایج fitz توجه: روش‌های مختلف استخراج متن) PDF. برای خواندن متن از (PyMuPDF) fitz استفاده از کتابخانه PDF: خواندن تشخیص نوع. (استفاده می‌کند ()page.get_text تاثیرگذار است. نسخه فعلی از Regex متفاوتی در ساختار متن می‌دهند که روی سند: تلاش برای تشخیص وارداتی یا صادراتی بودن سند بر اساس وجود کلیدواژه‌های "گیرنده" (برای وارداتی، نزدیک فیلد ۸) یا "صادر کننده" (برای صادراتی، نزدیک فیلد ۲؟). در صورت عدم تشخیص، پیش‌فرض وارداتی در نظر گرفته می‌شود. رویکرد (با الگوهای اولیه) Regex اولیه: فقط

تمام فیلدها رو استخراج کنیم. مشکل: الگوهای اولیه خیلی شکننده بودن. با کوچکترین Regex ایده: سعی کردیم فقط با الگوهای استخراج می‌کرد، الگوها شکست می‌خوردن و فیلدها خالی fitz تغییری در فاصله‌ها، چیدمان متن یا حتی کاراکترهای نامرئی که می‌موندن (مثل مشکلاتی که با شرح کالا یا تعداد بسته داشتیم). متن فارسی و برعکس شدن کاراکترها هم چالش اضافه می‌کرد. Regex برای کمک به LayoutLM معرفی مدل

به تنهایی برای فیلدهای پیچیده‌تر (مثل شرح کالا که چند خطی بود یا فیلدهایی که لیبل و مقدارشون جابجا Regex ایده: وقتی دیدیم مطرح شد. این مدل‌ها علاوه بر متن، موقعیت کلمات LayoutLM بود) کافی نیست، پیشنهاد استفاده از یک مدل یادگیری ماشین مثل در صفحه رو هم درک می‌کنن و می‌تونن برای تشخیص موجودیت‌ها (مثل "شرح کالا"، "کد کالا") آموزش ببینن. هدف، مدل، فیلدهای ساده‌تر و با ساختار مشخص‌تر رو. آماده‌سازی داده برای مدل: لیبل‌گذاری Regex 17 فیلدهای سخت رو استخراج کنه و PDF

نمونه، دقیقاً کدوم PDF نیاز: مدل‌های یادگیری ماشین نیاز به داده‌های آموزشی لیبل‌گذاری شده دارن. یعنی باید به مدل بگیم توی هر مربوط به کدوم فیلد (لیبل) هست. فرآیند: صحبت کردیم که باید از (Bounding Box - با مشخص کردن موقعیتش) قسمت از متن استفاده کنی تا دور کلمات مربوط به هر فیلد توی (یا حتی اسکریپت‌های ساده‌تر UBIAI, Label Studio مثل) ابزارهای لیبل‌گذاری رو بهش اختصاص بدی. خروجی این (description, product_code) مثلاً نمونه، کادر بکشی و لیبل درست PDF اون 17 تا یا فرمت‌های مشابه هست. چالش: لیبل‌گذاری فرآیندی زمان‌بر و دقیق هست و نیاز به حوصله داره. JSON فرآیند معمولاً فایل‌های LayoutLM مدل (Fine-tuning) کیفیت لیبل‌ها مستقیماً روی کیفیت مدل آموزش‌دیده تأثیر می‌ذاره. آموزش

هاگینگ فیس استفاده می‌کردیم تا یک transformers فرآیند: بعد از آماده شدن داده‌های لیبل‌گذاری شده، باید از کتابخانه‌هایی مثل کنیم. این یعنی مدل باد (fine-tune) رو روی داده‌های خودمون تنظیم دقیق (pretrained) از پیش آموزش‌دیده LayoutLM مدل می‌گرفت که الگوهای موجود در اظهارنامه‌های گمرکی ما رو تشخیص بده. چالش: پیچیدگی فنی: نیاز به نصب کتابخانه‌های سنگین برای سرعت (GPU مثل) ، درک مفاهیم یادگیری ماشین و احتمالاً دسترسی به سخت‌افزار مناسب(TensorFlow یا PyTorch مثل) ممکنه برای آموزش یک مدل خیلی دقیق و قابل تعمیم به همه انواع اظهارنامه‌ها PDF بخشیدن به آموزش داشت. حجم داده: 17 تا Regex ، می‌تونست زمان‌بر باشه. ترکیب نتایج مدل وGPU کافی نباشه. زمان‌بر بودن: فرآیند آموزش، حتی با

ترکیب Regex ایده: بعد از اینکه (فرضاً) مدل آموزش داده شده و می‌تونست فیلدها رو استخراج کنه، باید نتایجش رو با نتایج Regex می‌کردیم. استراتژی‌ها: چند راه رو بررسی کردیم: اولویت با مدل: اول نتایج مدل رو برداریم، بعد جاهای خالی رو با نتایج این استراتژی رو توی کد هم) رو برداریم، بعد جاهای خالی رو با نتایج مدل پر کنیم Regex اول نتایج :Regex پر کنیم. اولویت با ترکیبی/بر اساس اطمینان: برای هر فیلد تصمیم بگیریم که نتیجه .(اجرا می‌شد Regex پیاده کردیم ولی چون مدل نداشتیم، عملاً فقط مثلاً بر اساس امتیاز اطمینان مدل یا قوانین مشخص). چالش: وابستگی به مدل: این مرحله کاملاً به موفقیت) Regex مدل بهتر‌ه یا مرحله آموزش مدل وابسته بود. پیچیدگی منطق ترکیب: نوشتن کدی که بتونه نتایج دو منبع مختلف رو هوشمندانه ترکیب کنه و تداخل‌ها رو مدیریت کنه، خودش چالش‌برانگیز بود. چرا این مراحل (فعلاً) ناموفق بودند یا متوقف شدند؟

بود. عدم قطعیت Regex پیچیدگی و زمان: مراحل لیبل‌گذاری و آموزش مدل به مراتب پیچیده‌تر و زمان‌بر‌تر از تمرکز روی بهبود ، تضمینی نبود که مدل نهایی دقت خیلی بالایی داشته باشه و ارزش صرف اون (17 PDF) نتیجه مدل: با توجه به حجم داده محدود و اصلاح الگوهای PDF دیدیم که با صرف وقت بیشتر روی تحلیل ساختار :Regex همه زمان و انرژی رو داشته باشه. پیشرفت با رو به شکل قابل توجهی بهبود بدیم و به استخراج Regex ، تونستیم نتایج(کردیم package_count مثل کاری که برای) Regex :اکثر فیلدهای مورد نیاز نزدیک بشیم. نتیجه‌گیری

بذاریم، چون سریع‌تر به نتیجه می‌رسید و Regex تصمیم گرفتیم که فعلاً تمرکزمون رو روی بهینه‌سازی و پایدارسازی روش و ترکیب نتایج، یک مسیر کاملاً معتبر و قدرتمند هست، اما به عنوان یک LayoutLM پیچیدگی کمتری داشت. روش استفاده از مدل هایی مواجه بشیم که ساختار خیلی پیچیده‌تر یا غیرقابل PDF بهبود بالقوه در آینده در نظر گرفته می‌شه، مخصوصاً اگر با به تنهایی از پسشون برنیاد Regex پیش‌بینی‌تری دارن و.
